EDUCATION

BEng. Software engineering (Co-op), Concordia University

Sep 2019 – present

Relevant courses: OOP in Java, Algorithm design, Database systems, Advanced C++, Advanced game design and animations, Software design, testing and quality control, Software security

PROFESSIONAL EXPERIENCE

Full-stack Software engineer, Tap medical

Aug 2020 – Apr 2021

- Impacted overall workplace performance by increasing efficiency of QA testing
- Replicated UI/UX mockups using React
- Built full admin dashboard with live Chat between admins and customers
- Set up a database recovery system for the QA
- Automated the workflow of the quality control process using selenium with python and increased testing speed by 50%
- **Technologies worked on:** Blade, React, Laravel PHP, Python with selenium, MySQL, Amazon AWS, Jenkins

PROJECTS

Stack Overflow clone (School project) [🔗](#)

Sep 2021 – Dec 2021

- Lead a team of 7 developers to build a full-stack web application where user can ask, respond and react to questions
- Designed and implemented an authentication system
- Used Eloquent ORM to build relations between users, questions and answers
- Set up continuous integration using Travis CI
- **Technologies used:** Laravel PHP, Blade, MySQL, Eloquent

Cloud Drive (Similar to Google Drive) [🔗](#)

Sep 2020 – Aug 2021

- Full cloud platform where you can upload, modify, delete and share files
- Designed and implemented a complete REST API to communicate between React frontend and NestJS backend
- Programmed a secure authentication system using JWT
- Used TypeORM to communicate with MySQL database to store users data and files metadata
- Hosted the entire application to the web on a Raspberry Pi that can be accessed from anywhere around the world
- **Technologies used:** React, NestJS, TypeORM, MySQL, Linux and Apache

AWARDS

1st place winner ConUHacks VI hackathon [🔗](#)

Jan 2022

- Query the customer and orders data from a 3rd party REST API from the frontend using
- Add cache to store the fetched data locally to increase performance
- Self-hosted the backend using Linux, apache, and Raspberri Pi
- Implement a secure login with multi factor authentication using the Twilio API
- **Technologies used:** NestJS, NextJS, MySQL, TypeORM, ChakraUI

1st place winner iLink hackathon

Sep 2021

- Built a full-stack voice driven web application using Laravel and MVC design pattern
- Processed and parsed user voice input using and executed action accordingly
